DETAILED ACTION

Allowable Subject Matter

1. Claims 1-5, 7-15 and 17-29 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The present invention is directed to a method for inverse multiplexing unmanaged traffic flows over a multi-star switch network. The prior arts in the record fail to teach or make obvious to a method/device comprising moving an arriving unmanaged packet having the ESN, an arriving managed packet received from the switch fabric output, or a placed unmanaged packet having the ESN in the SNSUT, to an intended output queue, wherein the placing and moving are carried out by a source-node-specific-sequence-checking-process (SNSSCP) within a structure of the claim. These features are claimed in the independent claims 1 and 11 and render them allowable. The prior arts in the record also fail to teach or make obvious to a multi-star network comprising a multi-star switch fabric; and an input device, connected to the multi-star switch fabric, having a plurality of Switch-Specific Managed-Traffic Queues (SSMT), an unmanaged traffic queue, and a switch input scheduler with a structure of the claim. These features are claimed in the independent claim 22 and render it allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
